

JSON App Notation

Jason - Oak - Yuth

Growth Session #17 - August 23-24 2018

- Structural notation of a whole app, screen and view
- Similar to HTML

- Navigation
 - Screen 1
 - Image Title
 - Container
 - Image
 - Label
 - Text Button
 - Screen 2
 - Text Title
 - Container
 - Label
 - Label
 - Image

Advantage - Cross Platform yet native

- Unlike react native or other cross platform app framework JSON App Notation runs on native environment.
- The concept is a bit different as it is only consider how we format the application structure like how HTML was defined.`"text": "Red Planet"`

Advantage - Very dynamic and also can be local

- Just like HTML the source can be vary from network to local Great for AB testing without compromising user experience.

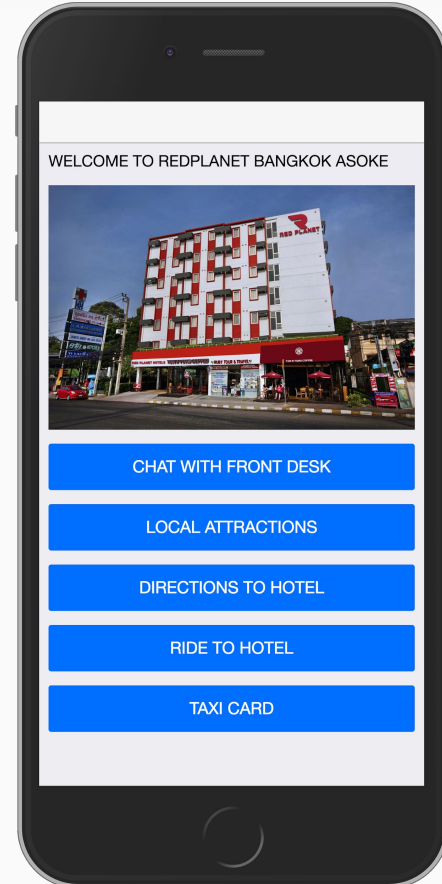

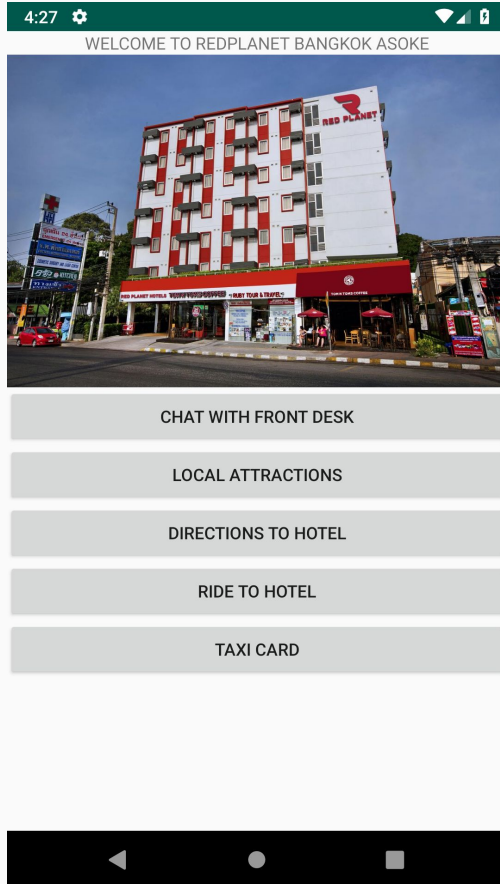

Advantage - For A/B testing

- Can conduct A/B testing without compromising user experience
- For example an app with buy button
- On the server they can send out different layout
 - Case 1
 - Red buy button
 - Promotional Image
 - Case 2
 - Promotional Image
 - Black buy button
- This can be done with native framework
- Check statistics

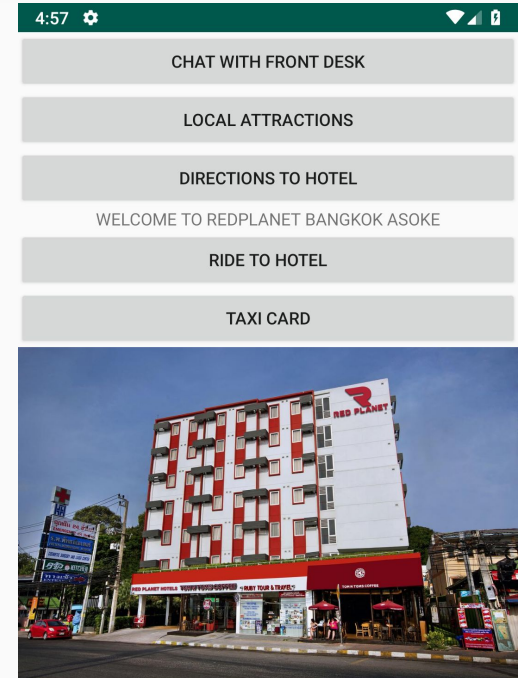

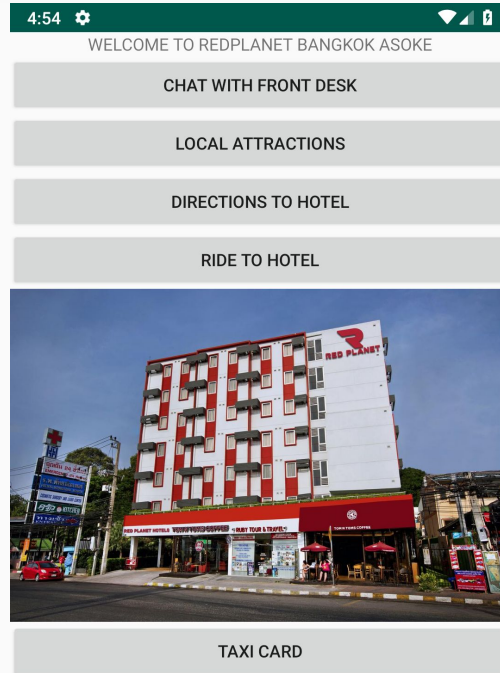

Achievements and progress

- An in-stay like screen

Comparison

Easy to change

Next Steps

- Action handler
- Layout and styling

Thanks!
