

iOS Template - Good bye XCbakery

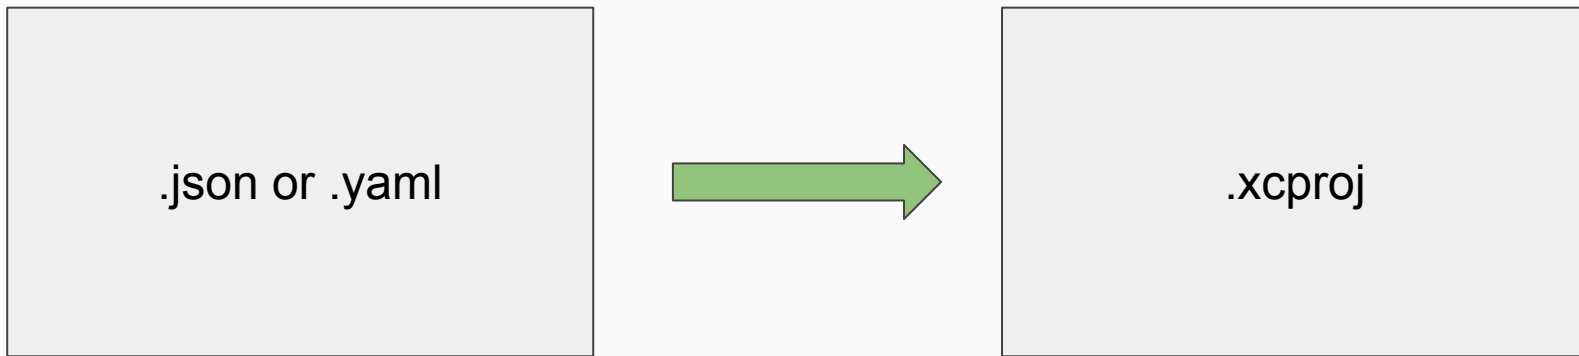

Jason - Team

Growth Session #13 - March 15-16 2018

- Building template engine for Xcode
- Building iOS template

By the time I started XC bakery

- In March 2017, I researched for template engines for Xcode project but there were no .xcproj manipulating software written in Swift
- So I was trying to build a software to write .xcproj from simple configuration files.

Now there are some promising projects

By around June 2017, a guy named Yonas Klob from Sydney started a very interesting project trying to do what I intended to do with XCBakery

Now there are some promising projects

It is XcodeGen: creating .xcproj from json or yaml configuration

So I tried XcodeGen

- Build a simple iMessage sticker apps
- To check how much they have come so far
- It actually generate the project
- The process and configuration file formats are almost similar with what I wanted before

But...

- Making .xcproj from configuration is not productive and as much complex as manipulating .xcproj itself
- CookieCutter is an easier alternative to generate a project

Achievement and progress

ios-template

Our optimized iOS template used in our projects

Usage

Run `Bakery` file to generate project from template. Simply follow the steps.

What's included

Below are what's included in the template project.

Thanks!
