

Olivier - Oncel

Growth Session X (#10) - December 21-22 2017

- A set of re-usable ruby gems for:
 - Authentication
 - Admin Panel
 - And more to come e.g. oAuth API
- Mountable Ruby on Rails engines:
 - Requiring minimal configuration
 - Based on our experience best practices
- A Github organization: <https://github.com/burigems>
 - Website to explain the project
 - Similar to a past project e.g. [XCBakery](#)

What are Ruby on Rails mountable engines? And why?

Self-contained Rails applications which provide that can be inserted in any application

What is that name?

- Gems are Ruby libraries
- Buri means city in Thai e.g. buriram, saraburi
- Buri is almost an anagram of Ruby
- Pun with the Ruby Package manager RubyGems

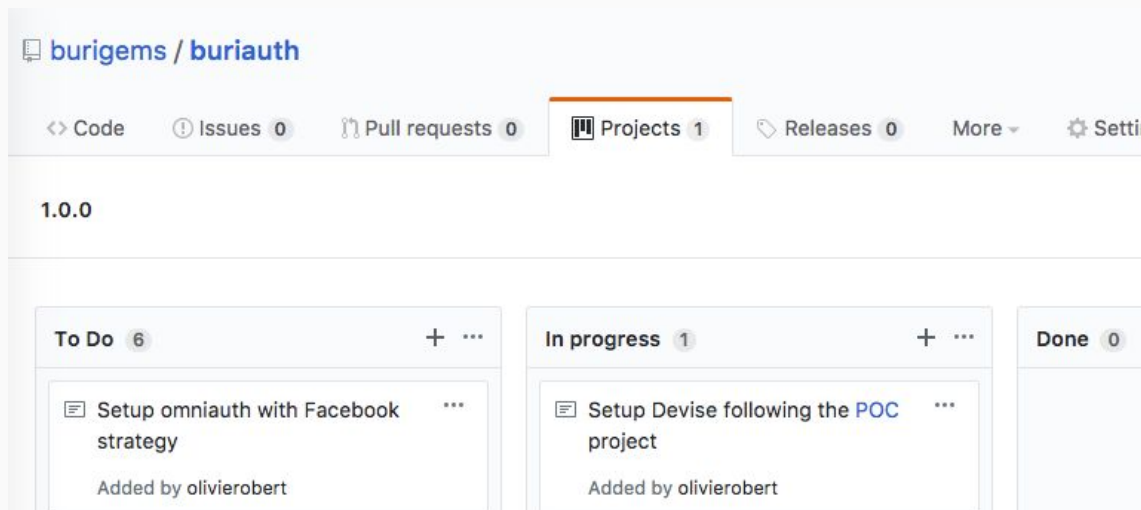

Achievements and progress

BuriAuth: <https://github.com/burigems/buriahth>

- Created the mountable authentication engine with rspec test environment
- Configure Devise to work in an engine
- Set up the gem configuration system
- Uni testing for routing and configuration
- **Actually usable default views**
- **Setting up core omniauth**

Next Steps

- Add support for oAuth login: Facebook, Google, LinkedIn and Instagram
- BuriAdmin: mountable engine based on Rails Admin
- Create a gem template to speed up the development of gems
- Github hosted website for *burigems* to showcase the project

Building gems takes
loads of time but it's
worth it.

I have a dhaka topi
now!

Thanks!
