

Localized Keys Iterator #2

Team

Growth Session #23 - March 21-22 2019

Recap

- A tool for iterating through Xcode project to find matched localized keys
- Write the found keys incrementally in *Localizable.strings* files
- Currently used in Braive
- *Added support for Swift Package Manager*
- *Refactored the project to make it more testable*

Supported format

```
"general.some-string.hello".localized
```

Add support for Clean command

To remove unused localized keys throughout the project with one command.

Add support for .strictsdict file

To support pluralization.

- **Clean** command
- *.stringsdict* validation with **Pluralize** command
 - With the help of [AEXML](#) to read the *.stringsdict* DOM
- Command line arguments support
- Command decomposition:
 - Run
 - Clean
 - Pluralize

Next Steps

- Real support for *.stringsdict* file, not just validation.
- Integrate **Pluralize** command into **Run** command.

Thanks!
