

UI Tests Stubbing

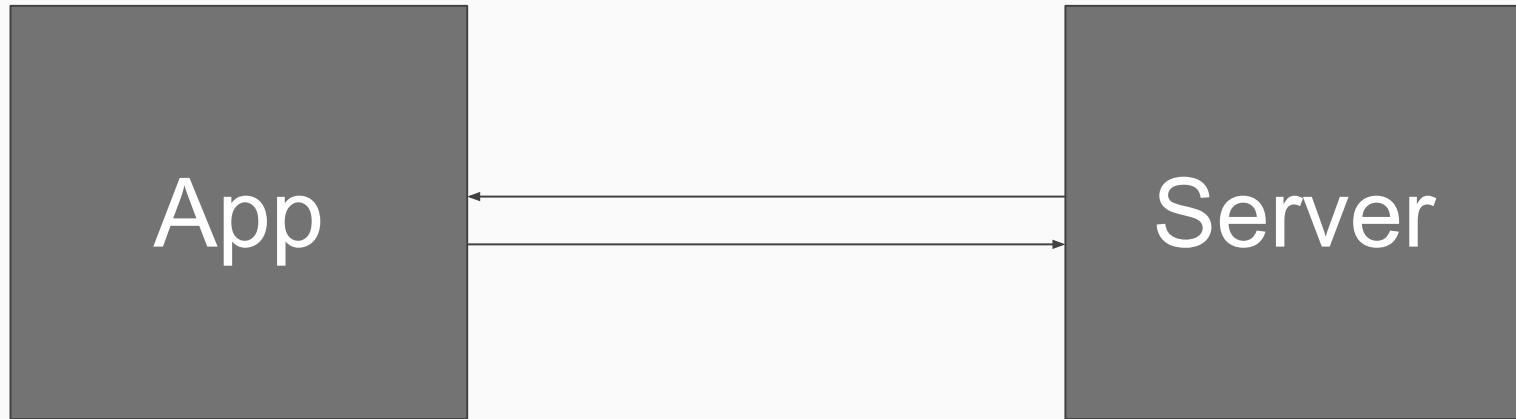

Nikita

Growth Session #17 - August 23-24 2018

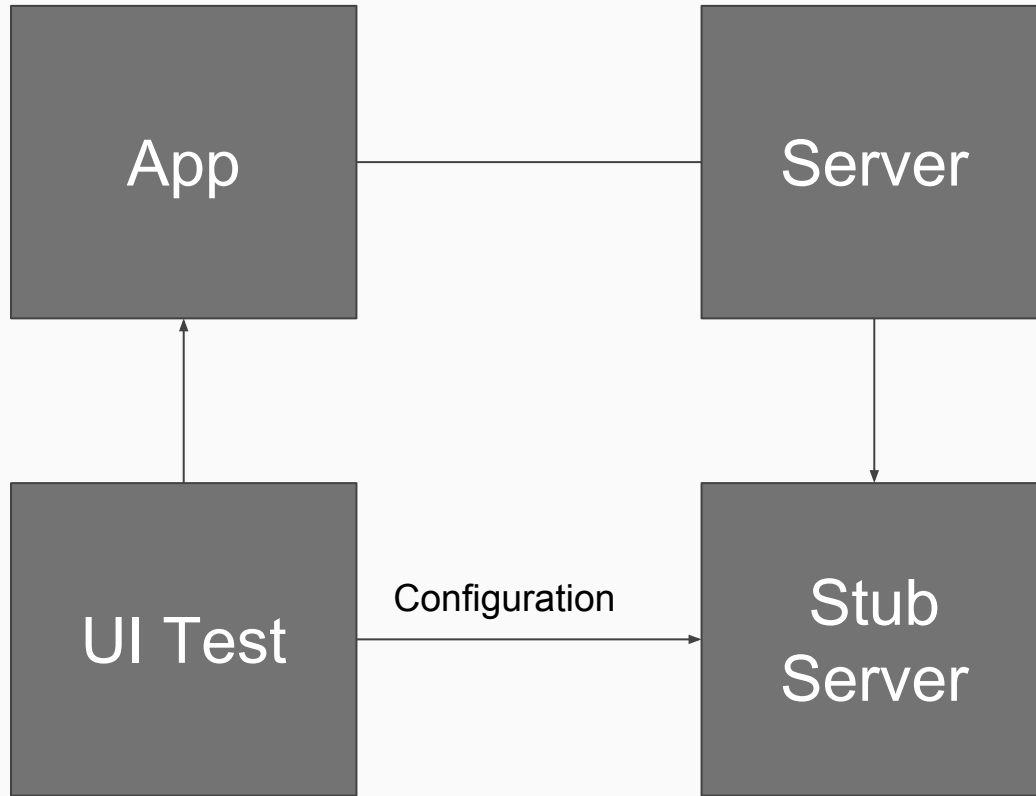

- How we can stub UI tests in iOS
- How we should stub UI tests at all

How to stub

How to stub

How to stub

- Swifter
- Embassy
- Lightweight HTTP engines

How to stub

- Swifter, Embassy - lightweight HTTP engines

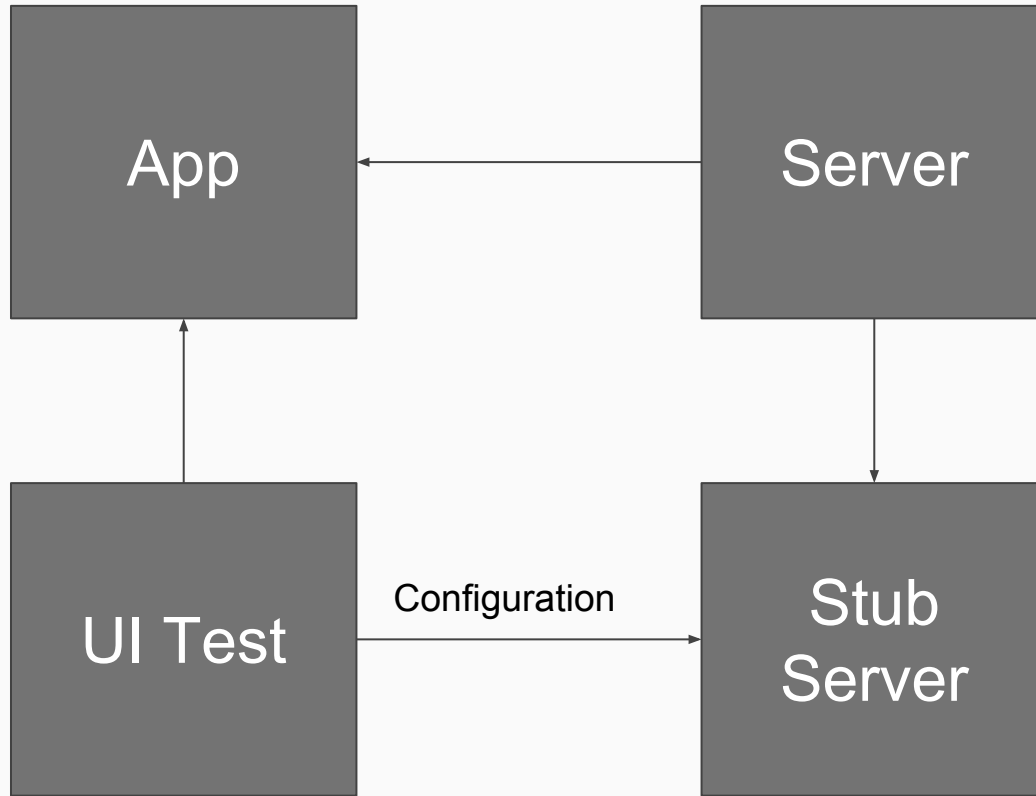

```
dynamicStubs.setupStub(url: "/api/hotel/{hotelId}", filename: "hotel_stub")  
app.buttons["open_hotel"].tap( )
```

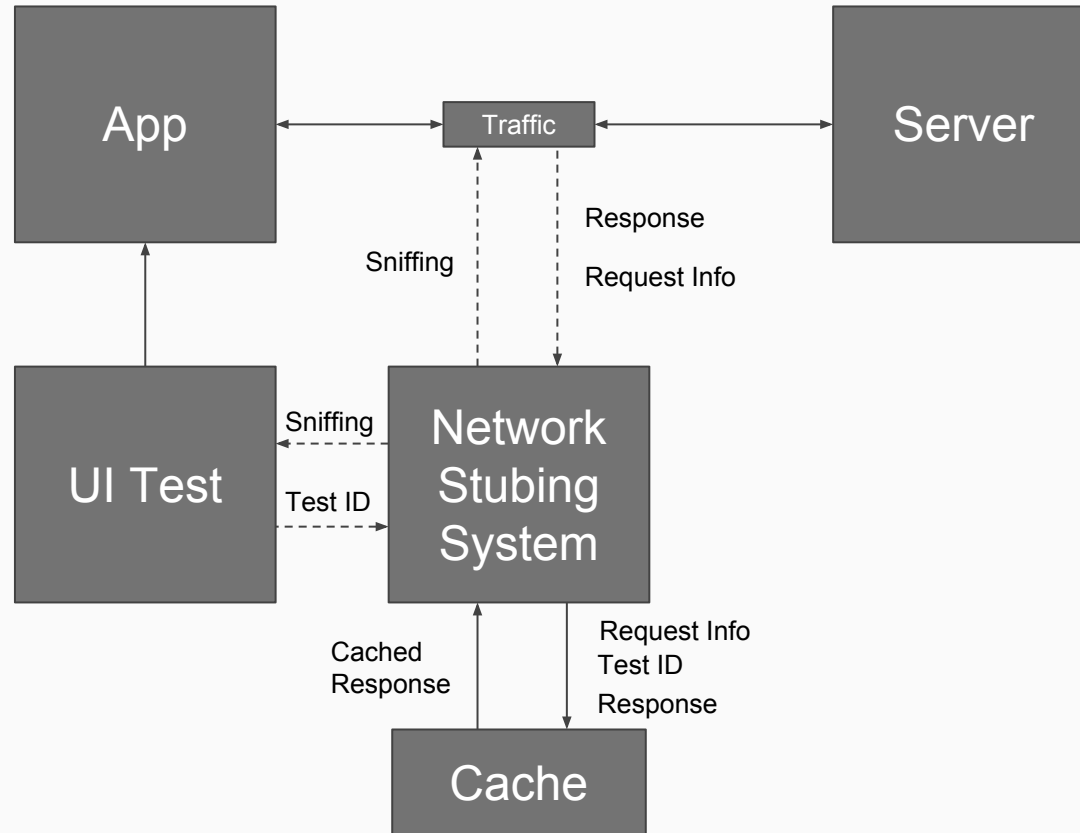

Problems

- JSON might be not relevant
- JSON for different cases
- Only XCUITest compatible

Solution

Solution

Pros:

- No need to adjust UI tests
- JSON will be always relevant
- System automated
- Can be compatible not only with XCUITests
- Android compatible

Cons:

- How to sniff identifier of test?
- Conflicts

Next Step

- Get some ruby developers
- Digg dipper together to find current solutions about NSS
- Create base prototype

Flexible stubbing
system is harder than
you might think.

Thanks!
