

Flutter on Red Planet

Metas (Oak)

Growth Session #16 - July 12-13 2018

- Flutter is a mobile SDK for creating iOS and Android application.
- It uses Dart programming language.

The good and the bad

- The Good

- It's open-source
- It builds really fast
- Hot reload!! It also keeps the current state that we are in ☐
- It has many basic UI components to use
- It has great IDE support. Currently, It supports Android Studio and Visual Studio Code.

- The Bad

- Layout is created in code, for the complex layout, it will be a little bit hard to read
- There are not many good practices to structure the app

Achievement

- Login screen
- In-Stay screen

Being able to see the
fast feedback is
something that
cannot be found in
native platform :-)

Thanks!
