Golang with Buffalo #2

Trung

Growth Session #13 - March 15-16 2018

A reminder: Buffalo?

Buffalo is a Go web framework influenced by the Ruby on Rails framework. It makes building web apps with Go easy and fun.

Supporting development progress faster with:

- Generators:
    - $ buffalo new project // Create new project
    - $ buffalo dev // Start dev server
    - $ buffalo generate resource model // Generate models
    - $ buffalo db generate model // Generate db model schema
    - $ buffalo db migrate

        ....

- Built-in db migrations:
    - Postgres (default
    - MySQL
    - SQLite3...

Achievements and Progress

- All features are basically done

- Deployed successfully with Docker to Heroku:

  https://evening-lowlands-86122.herokuapp.com

Nest Steps

- Improvements in model associations

- Fix the github login issue

- Provide a quick manual on the signup feature

It's still immature for Production, bugs and configurations are still being rolled out frequently but migration tools are not good enough to cover

But fun enough for exploring, especially if you are familiar with Rails before.

Thanks!
